

**INSTRUCTIONS:** All questions have only one correct answer

1. If attempted, which one of the following conditions has less than a 10% chance of CPR success:
  1. Acute renal failure
  2. Metastatic cancer with declining function
  3. Multi-organ failure
  4. Sepsis
  
2. The risk of post-CPR anoxic brain injury is in the range of:
  1. 1-2%
  2. 3-5%
  3. 8-12%
  4. 20-30%
  
3. The first step in a DNR discussion is to ...
  1. Ask the patient if they have completed an advance directive
  2. Decide if you believe CPR to be medically indicated
  3. Inform the patient that you will respect their decision
  4. Tell the patient your CPR/DNR recommendation
  
4. Which of the following statement is recommended when discussing CPR/DNR:
  1. *I believe that CPR is a futile intervention*
  2. *I do not believe CPR will help meet your goals*
  3. *Do you want us to do everything?*
  4. *What should we do if your heart stops?*
  
5. A DNR discussion in the setting of a serious life limiting illness is best conducted after a discussion of all the following, EXCEPT:
  1. Available treatment options to reverse or stabilize a life-limiting condition
  2. Asking the patient to predict the likelihood of CPR success
  3. The status of the disease and expected future course
  4. The prognosis: time and function
