

**INSTRUCTIONS:** All questions have only one correct answer

1. If attempted, which one of the following conditions has less than a 10% chance of CPR success:
  - 1.Acute renal failure
  - 2.Metastatic cancer with declining function
  - 3.Multi-organ failure
  - 4.Sepsis
  
2. The risk of post-CPR anoxic brain injury is in the range of:
  - 1.1-2%
  - 2.3-5%
  - 3.8-12%
  - 4.20-30%
  
3. The first step in a DNR discussion is to ...
  - 1.Ask the patient if they have completed an advance directive
  - 2.Decide if you believe CPR to be medically indicated
  - 3.Inform the patient that you will respect their decision
  - 4.Tell the patient your CPR/DNR recommendation
  
4. Which of the following statement is recommended when discussing CPR/DNR:
  - 1.*I believe that CPR is a futile intervention*
  - 2.*I do not believe CPR will help meet your goals*
  - 3.*Do you want us to do everything?*
  - 4.*What should we do if your heart stops?*
  
5. A DNR discussion in the setting of a serious life limiting illness is best conducted after a discussion of all the following, EXCEPT:
  - 1.Available treatment options to reverse or stabilize a life-limiting condition
  - 2.Asking the patient to predict the likelihood of CPR success
  - 3.The status of the disease and expected future course
  - 4.The prognosis: time and function
